

Practical Task 1

Follow these steps:

- Create a file called **alternative.py**
- Write a program that reads in a string and makes each alternate **character** into an upper case character and each other alternate character a lower case character.

e.g. The string “**Hello World**” would become “**HeLlO WoRlD**”

- Now, try starting with the same string but making each alternative **word** lower and upper case.

e.g. The string: “**I am learning to code**” would become “**i AM learning TO code**”.

Tip: Using the **split()** and **join()** functions will help you here.
